Getting Started

Follow these instructions to get crafting in no time!

1. Unzip downloaded files

- Unzip on Windows PC — [page 4](#)
- Unzip on Mac — [page 5](#)
- Unzip on iPad/iPhone — [page 6](#)

2. Import files into your software

a) Cricut Users

- Import single file into Cricut Design Space — [page 9](#)
- Import multiple files into Cricut Design Space — [page 10](#)

b) Silhouette Users

- Import single file into Silhouette Studio Library — [page 11](#)
- Import multiple files into Silhouette Studio Library — [page 12](#)

c) Brother Scan-N-Cut Users

- Import SVG files in Brother Scan-N-Cut software — [page 14](#)

Unzip the downloaded files on Windows PC

Here is how to unzip the files on Windows PC by using built-in unzipping capabilities.

1. Go to the folder with downloaded zip file(s).
2. Right click on zip file you want to unzip and select “Extract All” option in the opened menu.
3. Select destination folder to unzip the files to.

Please Note: If there are more than one zip file included with your purchase, it is recommended to choose the same Destination folder for all of them.

4. Wait for unzip to finish.
5. Repeat step 2-3 for every zip file that was included with your purchase.

Once you finish performing above steps, you will find all of your files in the Destination folder you’ve chose in step 3.

Unzip the downloaded files on Mac

Here is how to unzip the files on Mac computer by using built-in unzipping capabilities:

- 1.** Double click on zip file.
- 2.** Wait for system to unzip the files.
- 3.** If there is more than one zip file included, repeat steps 1-2 until all zip files are unzipped.

Unzip the downloaded files on iPhone/iPad

Here is how to unzip the files on iPad/iPhone computer by using free third part unzipping app **Readdle**.

1. Install Readdle app from [here](https://readdle.com/documents) (https://readdle.com/documents).
2. Launch “Documents” app.
3. Browse to downloaded zip file(s) and just tap on them one at a time. Each time you tap wait for app to finish unzipping before moving to the next zip file (if there any).
4. You unzipped files will be in the same folder where the zip files are.

How to preview your files in **File Explorer** on Windows PC

Here is an easy way to preview SVG files right from within your File Explorer. If you are using Windows PC

1. Install SVG extension found [here](https://github.com/maphew/svg-explorer-extension/releases) (https://github.com/maphew/svg-explorer-extension/releases)

Please Note: If you have a 64bit system, download “dssee_setup_x64_v011_signed.exe”, otherwise use “dssee_setup_i386_v011_signed.exe”.

2. Clear icon cache (<http://www.thewindowsclub.com/rebuild-icon-clear-thumbnail-cache-windows-10>)

3. Restart your PC

4. Make sure you Explorer “View” is set to “Thumbnails”.

5. Enjoy

Now you will see thumbnail pictures of any SVG file on your computer as if they were a regular picture files. You can also do cool things like search for SVG in a main folder with all bundle's files to view all the files at once, make catalogs/binders/cheat sheets with all designs, etc.

How to preview your files in **Finder** on Mac

1. Install the [Gapplin](http://gapplin.wolfrosch.com) app:

<http://gapplin.wolfrosch.com>

2. Go to the folder with your SVGs and start playing with View Option Window by increasing/decreasing the icons size. Try first to do so in Columns View then switch to the Icons View. Make sure “Show icon preview” is checked.

3. Enjoy!

How do I use/import SVG files in **Cricut** **Design Space**

Follow these instructions to import SVG file into your Cricut Design Space software:

1. In Cricut Design Space click on “**Upload Images**” link on the left.
2. Click “**Upload Image**” button.
3. Click “**Browse Image**” button.
4. Browse to the folder with your SVG file.
5. Chose the required file. Click **Open** and then **Save**.

Is there a way to import multiple SVG files into **Cricut Design Space** at once?

Currently, Cricut Design Space only supports importing one SVG file at a time.

As a workaround, import SVG file from **CRICUT folder** that contains all of the SVG files on same page, and then edit out the unwanted ones.

How do I use my purchased files in my **Silhouette Studio** software?

First you need to determine what version of Silhouette Studio software you have: Basic or Designer Edition.

You can check by going to “**Help > About Silhouette Studio...**” in your Silhouette Studio. If you don't see words “**Designer Edition**” anywhere in the opened window, then you have a **Basic Silhouette Studio**.

If you have **Basic Silhouette Studio** software you will need to use **DXF** format files. Import DXF file by going to “**File > Import > Import to Library...**” in your Silhouette Studio.

If you have **Designer Edition Silhouette Studio** software you will need to use **SVG** format files. Import SVG file by going to “**File > Import > Import to Library...**” in your Silhouette Studio. You may need to select “SVG” in “Files of type” dropdown box.

How do I import multiple files into my **Silhouette Studio**'s Library at once?

1. Go to your Library in Silhouette Studio.
2. Open a separate File Explorer (outside Silhouette program). Browse to the folder where your DXF/SVG files are stored.
3. Arrange Silhouette Studio (with opened Library) and File Explorer windows on your screen so you can see both at the same time.
4. In File Explorer window select all the DXF/SVG files you want to import with your mouse.
5. Now drag the selected files from File Explorer and drop into "My Library" area in Silhouette Studio. Alternatively, you can drop the files on any of the folders you see under "My Library" folder in the left-hand side of the library.

How do I weld letters/ designs together the right way in **Silhouette Studio** software?

Before welding do the following for each letter/design you wish to weld together:

1. Select the letter/design with your mouse
2. Click on **"Make"** under Compound Path in **MODIFY** Window.

Once all the letters turn red, arrange them the way you like and select all of them at once with your mouse. Click on **"Weld"** under Modify in **MODIFY** Window and you all set!

How do I use SVG file in **Brother Scan-N-Cut** software?

1. Go to “**Project > Import SVG/FCM file...**”
2. Click on “**Choose File**” button.
3. Browse to SVG file you’d like to convert and select it, then click the “**Open**” button.
4. Click “**OK**” button on the bottom

That’s it! Now you can work with the file or download it to use with your Brother machine.

How to use Alphabets efficiently

For using alphabets in I would recommend to use all-in-one SVG file from **CRICUT folder** found inside of each alphabet folder.

This file has all the letters of the alphabet on the same page.

Simply import it, delete the unwanted letters, arrange, group and scale the remaining letters the way you like and you're good to go!
